

ClinicalKey: helping doctors at Mumbai Hospital save time, improve care

As a large multi-specialty hospital, with the largest number of intensive care unit beds in the bustling city of Mumbai, Kokilaben Dhirubhai Ambani Hospital is a leader in clinical practices and an early adopter of new medical technology. However, until four years ago, its doctors were using multiple subscription databases and paper-based resources that lacked comprehensive coverage and speedy information retrieval. In fact, barely a quarter of the hospital's more than 300 physicians even used those outdated systems.

In 2011, the hospital decided to upgrade its clinical reference database from little-used older systems to Elsevier's ClinicalKey. It has quickly become a trusted resource for the physicians at the hospital thanks to its comprehensive, regularly updated set of more than 12 types of content. This includes more than 1,100 books, 600 journals, 2,900 drug monographs, 4,000 medical practice guidelines and 13,000 procedural animations and videos. Doctors have credited ClinicalKey with time-saving searches, trusted content, a user-friendly interface, and improved clinical outcomes. As a result, their use of the system has increased more than five times compared with previous offerings and they report saving time with faster, more comprehensive searching of medical information as they integrate ClinicalKey into their daily care for patients.
