Launch of 'Student Life Cycle" an academic management software by PGIMER Chandigarh for the students enrolled for various postgraduate/postdoctoral courses of the Institute.

Today Prof. Vivek Lal, Director, PGIMER, launched academic management software. This software will be used for total management of admissions, examinations and payments etc. of all the students enrolled for various postgraduate/postdoctoral courses of the institute (MD/MS, DM/M.Ch, PhD, B.Sc./M.Sc and Nursing courses etc) from admission to the declaration of result and even as alumni also. The unique ID will be generated for each student at the time of admission and all records pertaining to the students will be available in this software. The students themselves can access his own complete records/information related to his progress/exams/fees etc. and the particular information which the student wants to know will automatically be sent to the concerned student via email/SMS. The payments for admission, examination & any other purposes can be paid online by using this software. It is commendable that this software was developed in-house under the guidance of Prof. G.D. Puri, Ex-Dean (Academic), Prof. R. Sehgal, Dean (Academic), Prof. S.S. Pandav (Incharge Computer Section), Mr. Lal Bahadur & Om Prakash (Computer Programmers of the Institute), Sh. Ummed Mathur, Registrar and the entire team of the Academic Section.

This facility will be linked up with the Digi-locker so that the students can easily access their documents/certificates pertaining to their academic credential and the same will be reflected on the software in the next phase. This is for first time that a software has been developed/launched to facilitate the students and their academic activities for AIIMS like institutes across the country. The Institute is also planning to make a specific mobile based application for easy use of the residents/students. This software will also have the potential for wider applications in other AIIMS like Institute.
